EDUCATION

PES University

Bachelor of Technology (B.Tech) in Computer Science (Artificial Intelligence and Machine Learning)

Aug. 2023 – Present

Bengaluru, India

- CGPA: 8.80/10 | 12th (Karnataka PU Board): 96% | 10th (ICSE): 99.6%

EXPERIENCE

G2.com

Jun. 2026 – Present

Data Engineering Intern

Bengaluru, India

- Automated a **12-hour, 3-tool cross-team workflow into one-click execution** by building an end-to-end pipeline (Python, Snowflake, Clay API, Streamlit) shipped to **production on AWS EKS** via GitOps CI/CD and peer code reviews
- Achieved **99.9% domain coverage across 17K companies** by root-causing wrong-domain failures and redesigning the enrichment waterfall (ZoomInfo, Clay providers, AI-agent consensus); raised LinkedIn profile coverage **from 50% to 70% across 29K+ contacts**

Guru Jana Chartered Accountants

May 2025 – Jun. 2025

Machine Learning Intern

Bengaluru, India

- Improved financial forecast accuracy to **96%** across 3 enterprise datasets (300K+ rows) by engineering 30+ features and benchmarking ARIMA, SARIMA, and XGBoost, informing quarterly revenue projections
- Reduced manual support queries by **40%** by building a RAG chatbot with the OpenAI API, LangChain, and semantic search, and by A/B testing fixed-size vs. semantic chunking to select the optimal retrieval pipeline

AIIESEC in India

Feb. 2025 – Jun. 2025

Product Manager

Bengaluru, India

- Improved conversions by **15%** by building automated Python dashboards tracking conversion funnels across 150+ partner organizations, surfacing a **22% onboarding drop-off** that drove a revised outreach strategy

PROJECTS

KeystoneDB: Embedded LSM-Tree Storage Engine | C++17 (GitHub)

- Scaled write throughput **~9x (1 to 16 threads)** by building a persistent key-value engine from scratch: CRC32-checksummed WAL, group commit, skiplist memtable, SSTables with bloom filters and sparse indexes, LRU block cache, and MVCC snapshots
- Guaranteed **zero acknowledged write loss under crashes** by implementing background leveled compaction (L0–L6) and validating durability with automated kill -9 crash tests, 56 unit tests, and ThreadSanitizer-based concurrency debugging

RaftKV: Distributed Replicated Key-Value Store | Go, Raft (GitHub)

- Implemented **Raft consensus from scratch** (no consensus library): leader election, log replication, and crash-safe persistence, achieving **sub-second leader failover** and linearizable reads and writes across a replicated cluster
- Proved **zero data loss under leader failures (1,299/1,299 acked writes verified)** in a chaos test killing the leader twice mid write-storm; **exactly-once semantics** via client-sequence deduplication, race-clean across 50 test runs

CacheWire: Redis-Compatible In-Memory Cache Server | Go (GitHub)

- Sustained **~397K GET req/s** by building a **TCP server** with full RESP2 protocol compatibility (runs unmodified against redis-cli and redis-benchmark), sharded hash-map storage, per-shard LRU eviction, and TTL expiry
- Ruled out an unnecessary lock redesign through systematic debugging and profiling, proving that the TCP/IP network stack, not lock contention, capped throughput

Vojna-Setu: Voice-First Multilingual GenAI Assistant | Next.js, AWS (Live), AI for Bharat Hackathon 2026

- Delivered voice-to-voice discovery of **21 welfare schemes across 5 Indian languages** with **100% availability under AWS outages** by deploying a full-stack assistant on Next.js 14, Amazon Bedrock, Polly, Transcribe, and DynamoDB; caching cut LLM calls by **40%**

Point of Sale Simulator: Full-Stack Retail System | React 19, TypeScript, Flask (GitHub)

- Engineered a full-stack POS system applying **secure coding practices** (bcrypt auth, RBAC, input validation) across **14+ REST APIs**, achieving **100% execution across 111+ unit and integration tests** while managing the full SDLC via JIRA and Agile/Scrum

SKILLS

Languages: Python, C++, C, Java, Go, JavaScript/TypeScript, SQL

Backend & Cloud: Flask, Node.js, Express.js, REST APIs, PostgreSQL, SQLite, NoSQL (DynamoDB, MongoDB), AWS (Bedrock, EKS, S3), Snowflake, Docker, Kubernetes, Git, CI/CD, Linux, Shell Scripting, JIRA, Vercel, Firebase

Frontend: React.js, Next.js, HTML/CSS, Tailwind CSS

Machine Learning: PyTorch, TensorFlow, Scikit-learn, XGBoost, MLflow, NLP, Generative AI (LLMs, RAG, LangChain)

Core CS & Software Engineering: Data Structures and Algorithms, Problem Solving, OOP, OOAD, SOLID Principles, Design Patterns, System Design, DBMS, Operating Systems, Computer Networks, Computer Organization, Cloud Computing, SDLC, Code Reviews, Testing and QA, Agile/Scrum

LEADERSHIP & HONORS

Drove **INR 5L in revenue** and **180% product growth (#1 national ranking)** by leading a 20+ member team as **Vice President, AIIESEC in Bengaluru** | Global Volunteer, Egypt (2025)

Honors: Prof. C N R Rao Merit Scholarship, top 20% of cohort (awarded 3x: 2024, 2025, 2026)
